Objective

Software Engineer at Accenture Federal Services specializing in Java, AI/ML, and cloud architecture with hands-on experience building generative AI pipelines, distributed data systems, and secure production applications across AWS and GCP. Strong background in LLM integration, event-driven automation, and high-scale backend engineering.

Education

University of Maryland, College Park

August 2020 – May 2024

Bachelor in Computer Science, Minor in Statistics

Certifications

Oracle Certified Professional, Java SE 11 Developer

AWS Solutions Architect - Associate

AWS Machine Learning Engineer - Associate

Technical Skills

Languages/Databases: Python, Java (Core, Enterprise, Spring Boot), SQL, Kotlin, C, Swift, CassandraDB

AI/ML: Vertex AI, AWS Bedrock, Gemini, Scikit-Learn, OpenCV, K-Means, OCR/LLM Pipelines

Cloud Platforms: AWS (Lambda, S3, SQS, IAM, API Gateway, AppFlow, CodeDeploy), Azure Functions, GCP Cloud Storage

Web & API Technologies: JavaScript, TypeScript, Node.js, Next.js, Postman, Flutter, React

Tools: GitHub, GitLab, Bitbucket, Docker, Kubernetes

Strengths: Distributed Systems, Event-Driven Architecture, Secure Software Design, MVC

Experience

Accenture Federal Services

June 2024 – Present

Software Engineer

Arlington, VA

- Built a cross-cloud, event-driven AI pipeline integrating AWS (S3, SQS, Lambda) with GCP's Vertex AI, leveraging Bedrock agents and Gemini models to automate PDF ingestion, transfer, and LLM-driven document processing at scale.
- Developed a full-stack Python-based Synthetic Data Generator replacing manual scripts, enabling ML/OCR test dataset creation through an intuitive Next.js interface and eliminating 100% of manual data prep.
- Engineered 6+ production AWS Lambda functions for distributed data processing, cutting workflow latency by 76% and increasing automation reliability across cloud environments.

People Tech Group

July 2022 – May 2024

Software Engineering Intern

Redmond, WA

- Leveraged AWS Lambda and App Flow to design and implement a custom Github connector, enabling seamless integration and automation of code repository workflows.
- Created a tailored Workday connector using AWS Lambda and App Flow, facilitating real-time data synchronization and automation between HR systems and internal applications.
- Collaborated with cross-functional teams to ensure security, scalability, and efficiency.

Projects

PalettePin | K-Means clustering, AI/ML for image processing, OpenCV, Deep learning, Algorithms

Jan 2025 – Present

- Developed an app that identifies color palettes from images, promoting sustainability by reusing clothes and decor to create new looks without buying replicas.
- Leveraged the MERN stack for full-stack development and implemented responsive UI for seamless user experience. Source code: [Palette Pin](#).

Campus Connector | Kotlin, PHP, Android Studio, Data Structures

Aug 2023 – Jan 2024

- Built an app connecting college students seeking services with student entrepreneurs offering them, supporting features like account creation, service discovery, bookings, ratings, and favorites.
- Utilized PHP for server communication and Kotlin for development. Source code: [Campus Connector](#).
